

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

Rob. Midgley.

Ad Lectorem, de Usu atque Utilitate Operis.

Ompegimus in unum volumen hanc Synonymorum, Epithetorum, Elegantiarum, Descriptionum et Comparationum supellectilem, habito delectu accurato ex optimis quibusque poëtarum monumentis, que adhue prodierunt; ut esset vel compendium vel complementum omnium operum, que artis poètica principes elucubrărunt.

Copia verò et faccunditas rerum ad poëticam pertinentium tanta, ut quicquid in multis authorum libris quasi quibusdam rivulis sparsum reperitur, ex hoc copioso fonte collectum inveniatur. Ordo autem et rerum distributio facilitatem et inveniendi rationem expeditissimam ostendit. Adjecimus Quantitatum omnium Indices, Notas, et Characteres, adhibità singulari diligentià, addità etiam poëtarum authoritate, que numeros probat, et Smetii ac Januæ Musarum vices supplet.

Ipse pavet, nec se, qui sit status, ipse fatetur Scire ratis rector, nec quid jubeatve, vetetve, Tanta mali moles, tantoque potentior arte est. Quippe sonant clamore viri, stridore rudentes; Undarum incursu gravis unda, tonitribus æther: Fluctibus erigitur, coalumque equare videtur Pontus, et inductas aspergine tangere nubes. Sepe dat (navis) ingentem fluctu latus icta fragorem. Jamque labant cunei, spoliataque tegmine cerm Rima patet, præbetque viam lethalibus undis. Ecce cadunt largi resolutis nubibus imbres. Inque fretum credas totum descendere cœlum ; Inque plagas cœli tumefactum ascendere pontum: Vela madent nimbis, et cum cœlestibus undis Æquorez miscentur aquz: caret ignibus zther. Cecaque nox premitur tenebris hyemisque, suisque. Discutiunt tamen has, præbentque micantia lumen Fulmina: fulmineis ardescunt ignibus undæ.
